- Babylon International School
- NEB
- Itahari, Sunsari

## SKILLS

### TECHNICAL SKILLS

- Programming languages: Java, C#, Python, Js
- Markup languages: Html, CSS
- Framework: Asp.net core
- Tools: Visual Studio, Visual Studio Code, SSMS, Figma
- Operating System: Windows OS

### SOFT SKILLS

- Communication
- Teamwork
- Quick Learner
- Critical Analysis

# SUJAN PRASAD BAJGAIN

## CAREER OBJECTIVE

To be a skilled web developer, enthusiastic about learning and building powerful, reliable systems. My focus is on developing skills while committing to collaboration and fostering an inclusive tech community.

## PROJECT

### Safe Turn

- Programming Language: C++
- Software: Arduino Ide
- IoT Device: Node mcu, sensors, led light

The Safe Turn project is designed to prevent collisions at blind spot turns using an IoT system. Key features include detecting upcoming vehicles and alerting vehicles on the opposite side to prevent collisions. Drivers receive alerts through traffic LED lights, which indicate distance using three different colors.

### Blood Connect

- Programming Languages: Java Script, C#
- Framework: ReactJS, ASP.NET
- Methodology: RUP
- Softwares: Visual Studio, Visual Studio Code, SSSMS, Figma

This second-year project aims to connect donors and recipients through a web application. Key features include donor registration, search functionality for donors by specific blood group and city, profile management, and the ability to find contact information for donors.

### Flare

- Programming Languages: Java Servlet
- Softwares: Eclipse, Xampp

Flare is an e-commerce web application that specializes in selling cameras. Key features of the application include a shopping cart, search functionality by price and name, profile management, camera order processing, and Admin Panel to manage products and orders.
